

## **WSS Seminar Bayesian Analysis**

**Date:** Tuesday, January 31, 2017

**Time:** 12:00 pm (noon) EST

**Instructor:** Alyson Wilson

**Place: Webinar**, free registration at : <http://workshop.testscience.org/related-webinars/>

**Sponsor:** WSS Defense and National Security

NASA, DOT&E, IDA, and ASA/SDNS are pleased to invite you to attend a webinar on January 31 at 1200 EST on Bayesian Statistics presented by Dr. Alyson Wilson from North Carolina State University. Dr. Wilson will emphasize a powerful feature of Bayesian analyses, the ability to combine multiple sources of information in a principled way to perform inference. This feature can be particularly valuable in assessing the reliability of systems where testing is limited (e.g., expense, treaty), which is of particular relevance in the Defense and Aerospace communities.

Dr. Wilson is an elected member of the International Statistical Institute. She is the winner of the Los Alamos National Laboratory (LANL) Director's Distinguished Performance Award (2008), the LANL Star Award (2008), the DOE Defense Programs Award of Excellence (2007), and the LANL Achievement Award (2000, 2005). She is a founder and past-chair of the American Statistical Association's Section on Statistics in Defense and National Security.

For more information on the webinar and to register, please see:
